

VIVID KOLLAGE

International Luxury Linen Trousseau Collection

www.vividkollage.com

Since 1999, Vivid Kollage linen has adorned luxury hotels in India, Europe, and the Middle East. Some of the world's most extravagant hotels and resorts have long relied on Vivid Kollage to ensure the best nights sleep for their demanding clientele. A deep sense of commitment, innovativeness, and high quality standards make Vivid Kollage a leading solution provider in the world of hospitality. With manufacturing bases in India, China, Turkey, Japan and Italy, we are able to cater to every need of our patrons, be it stylish bed, bath and spa linen or sumptuous restaurant and banquet linen. We represent in India some of the finest and most exclusive international luxury brands, including Beltrami Linen srl, Italy.

Vivid Kollage brings you the International Luxury linen Trousseau Collection - a marvellous melange of bed and bath linen for the bonny bride! Believe it or not, everything in this exquisite collection is Fibra di Legno, a delicate natural fibre made by Beltrami Linen srl, Italy, from the pulp of sustainably grown white birch trees.

There is nothing better in the world of textiles than FIBRA DI LEGNO or WOOD FIBRE, which combines the elegance of silk with the practicality of cotton! The fabric is woven with a brand new high-quality natural yarn of cellulose origin, obtained by processing wood pulp forests grown in compliance with environmental regulations laid down by the European Community.

Wood Fibre is:

- Soft and Silky to the touch
- Resistant and Biodegradable
- Sleek and Practical

birch

Certified birch forestry management of northern Europe.

pulp

The finest part of the wood, extracted from the trunk and crushed.

cellulose

A low-environmental-impact process turns the pulp into cellulose.

fibre

The cellulose is hot-drawn to become an ultrafine fibre.

Imabari Bath Towel Sets

Imabari Cotton Pile - Highly Absorbent, Quick - Drying, Ultra Soft,
Feather light, Deodorising effect

Imabari Towels

Imabari towel producers make use of underground water from the Soja river, which has its source on Mount Takanawa, and other high-quality water sources in order to achieve soft fiber textures and vivid colors. They have utilized these advantages and further refined their dyeing techniques to transform Imabari into the largest towel production region in all of Japan.

One of the independent quality standards established by the Towel Industrial Association states that “a section of the towel must start sinking within five seconds of being placed in water” (sink test), which demonstrates that the towel can absorb water from initial usage without being washed first.

Imabari towels quickly absorb sweat, water and other liquids, won't become clingy when used for wiping down one's body after getting out of the bath or wiping off sweat, and are gentle on the skin.
